X11 for Linux

X2Go

Requires an X2Go server running on the target server. Creates a full remote desktop session.

Client can be installed through the system repos, eg on Ubuntu:

```
sudo apt install x2goclient
```

X11 Forwarding

As long as your current environment supports X11, X11 forwarding can be enabled for an SSH connection using the -Y flag, eg:

```
ssh -Y username@gplogin3.ps.uci.edu
```

The forwarding can be tested by running `glxgears`.
